Summary

Software engineer running a production IoT metering and billing platform in **Go**, **Ruby on Rails** and **React** on **AWS**; I own billing, site onboarding, MQTT ingestion and releases. **30+ pull requests** in 9 months; intern to full-time in 6.

Experience

Josh Software *IoT water-metering & utility-billing platform* — Pune, India | Jan 2026 – Present

Associate Software Engineer — Jul 2026 – Present

- **Billing & payments:** owned the billing module across Rails and React: built per-site platform fees, offline bill payments, fixed or rolling due dates and approval reminders; corrected **129 of 140** wrong due dates and billed top-slab usage.
- **Site onboarding:** built onboarding end to end: company and site setup, a flats import (presigned S3, Sidekiq) and bulk resident mapping; onboarded a **195-meter** block with 0 rows refused and provisioned 480 devices.
- **Go/MQTT ingestion:** built site-level data-collection control (Go ingestion drops readings for inactive sites, toggled from React, one query path across **10** call sites) and DB-driven sensor config so new clients need no YAML edit.
- **Imports & reporting:** shipped a meter-remark bulk import making one device-service call per upload instead of per row, with a 409 concurrency guard, and a per-meter hourly usage breakdown with Excel/CSV export.
- **Infrastructure:** built and run staging for the Go/MQTT service on AWS EC2 (Docker, systemd, nginx), now on a reproducible Docker build; diagnosed Postgres exhaustion (**100/100**) and a 408-job Sidekiq backlog.
- **Releases & reviews:** run production releases across 4 repositories (8 PRs in one cut, no regressions) and review payment and background-job PRs, catching concurrency and data-loss issues before merge.

Software Engineer Intern — Jan 2026 – Jun 2026

- **Go MQTT pipeline:** reworked event ordering in the Go ingestion pipeline (QoS 0, device timestamps) after tracing negative water readings to QoS 2 redelivery; those support tickets **stopped**.
- **Meter health:** built a Go cron job emailing weekly non-responsive-meter reports through AWS SES, and Rails daily reports bucketing unreachable meters by 24 h and 3+ days.
- **Billing & payments:** built a site-configurable penalty component replacing duplicated logic, and integrated a bank payment gateway in React with live balance and limit checks.
- **Consumption tools:** built an admin consumption-correction API and an hour-wise usage report with Excel/CSV export.

InveeSync *Frontend Developer Intern* — Remote | Dec 2024 – Jan 2025

- React/Redux workflows for a manufacturing-automation SaaS, with client-side caching to cut redundant API calls.

Projects

Smart Rule-Based Approval Engine *Go, Gin, PostgreSQL, React, TypeScript* — Live | GitHub

- Rules engine auto-deciding leave, expense and discount requests; Go cron expiry job, JWT roles, React UI.

Fintech Fraud Detection *Ruby on Rails, PostgreSQL, Solid Queue* — Live | GitHub

- Real-time transaction risk scoring with device fingerprinting; fraud alerts and weekly summaries via Solid Queue jobs.

Technical Skills

Languages	Go, Ruby, C++, JavaScript, TypeScript, SQL
Backend & Data	Ruby on Rails, Gin, REST APIs, Sidekiq, MQTT, RSpec; PostgreSQL, TimescaleDB, MongoDB, Redis
Frontend	React, Redux-Saga, Zustand, TanStack Query, Next.js
Cloud & DevOps	AWS (EC2, S3, SES), Docker, nginx, systemd, Linux, Git, GitHub

Open Source & Writing

- **CopyQ** (12k stars, C++/Qt): hide-frame and hide-menu-bar options (#3733, #3732).
- **prometheus-operator** (10k stars, Go/Kubernetes): Alertmanager validation, Azure scrape fix (#8896, #8897, #8898).
- **Kepler** (1.6k stars, Go/Kubernetes): unprivileged Helm default, cgroupfs fix, CI check (#2584, #2591, #2592).
- **community-platform** (1.4k stars, React): three components moved to the design system (#4946, #4950, #4954).
- **helm/helm** (30k stars, Go): reviews with fix PRs, one adopted (#32616).
- **Medium:** *The Water That Flowed Backwards*, *The Restart Command…*, *The Fix That Only Reached Half the Server*.

Education

B.Tech, Computer Engineering (Honours in Cyber Security), KKWIEER, Nashik — **9.26** — 2026

Class XII (HSC), **91.67%**, 2022; Class X (CBSE), **93.00%**, 2020; Bhandara

Achievements & Leadership

- **Only student selected on day one** of campus placements (500+); **top 5** in the department; **VP, CSI Chapter**.
