

ARYAN PADMAKAR DESHMUKH

+91 7522932355 | aryan0deshmukh@gmail.com | [LinkedIn](#) | [Portfolio](#)

Associate Software Engineer with hands-on experience building scalable **backend** systems in **Go** & **RoR**. Experienced in developing production-grade **APIs**, background jobs, data pipelines, billing systems & cloud automation using **AWS SES**.

EDUCATION			
Year	Degree/Exam	Institute	CGPA/Marks
2026	B. Tech (Computer Engineering) & Honors (Cyber Security)	KKWIEER, Nashik, Maharashtra	9.16
2022	Maharashtra State Board of Secondary & Higher Secondary Education	Vikas High School, Bhandara	91.67 %
2020	Central Board of Secondary Education	Royal Public School, Bhandara	93.00 %

EXPERIENCE	
Josh Software Software Engineer Intern → Associate Software Engineer	Pune Jan 2026 – Present
– SimplySmart – Client Project Backend	
- Diagnosed inconsistent water meter readings by tracing MQTT and Go ingestion pipelines, identifying root causes in the data flow - Made ingestion flow asynchronous, switched QoS from 2 to 0 & used device timestamps reducing data inconsistencies by 90% - Built a background job in Go that automatically detects non-responsive IoT meters & sends weekly HTML reports through AWS SES - Improved production observability through structured logging for payment gateway and bluetooth smart meters integrations - Investigated & debugged billing workflow defects involving arrears, penalties, due dates & state transitions using binding.pry in RoR - Built unreachable meters job in RoR using last seen attribute data from sensor config API to detect inactive meters across sites - Built hour-wise consumption API by extracting logic from daily usage API into a service, reusing existing data and transforming it - Built suspected abnormal consumption detection job in RoR using configurable spike multipliers & valid-day consumption limits - Built API enabling admins to update inconsistent water meter consumption, replacing manual one-time fixes from Rails console	
– Smart Rule Based Approval System – Training Project Frontend GitHub Link	
- Implemented rule-based workflows to automate approval and rejection of various requests based on admin-defined dynamic rules - Built role-based dashboards using Zustand & TanStack Query, managing request state and caching API responses for consistency - Integrated secure APIs using Axios with JWT authentication, handling request validation, approval actions and real-time updates - Enabled real time tracking and analytics using Recharts and event driven updates, allowing managers to monitor request statuses	
– Fintech Fraud Detection – Training Project Backend GitHub Link	
- Detected fraud transactions by building Rails services with rule-based risk evaluation, multi-factor risk scoring and device tracking - Automated weekly summaries using background jobs, enabling analysis of transaction trends and scheduled reporting to users - Delivered real time fraud alerts by integrating synchronous risk evaluation with SolidQueue-based background jobs and SMTP	

PROJECTS	
Node Connect (Decentralized Chatting Application) Full Stack (Final Year Project) GitHub Link	
- Enabled 100% decentralized communication by developing Solidity smart contracts & giving tokenized incentives for engagement - Managed shared application data using React Context, ensuring consistent state synchronization for chats, users, and balances - Solved centralized identity limitations by implementing MetaMask authentication using Ethers.js, enabled wallet-based onboarding - Deployed smart contracts on the Ethereum Hoodi Testnet with live contract, enabling end-to-end decentralized communication	
Cash Your Coupons Full Stack (Self Project) GitHub Link	
- Solved unused coupon wastage by building marketplace using React Native Expo, enabling users to buy, sell & exchange coupons - Implemented authentication using Firebase Auth & stored other application related data in Firestore, enabling easy data access - Optimized user experience using Firestore onSnapshot listeners & local state management, ensuring instant updates on coupons	

SKILLS & CERTIFICATIONS	
Programming Languages: C, C++, Java, Python, JavaScript, Ruby, Go, SQL	Tools & Technologies: Bash, Git, Github, REST APIs, Linux
Frameworks Known: Next.js, Express, Ruby on Rails, React, React Native	Database: MySQL, PostgreSQL, MongoDB, Firebase Firestore
Coursework: Data Structures & Algorithms, OOPS, DBMS, CN, OS	Certifications: AWS (Credly) & React Native (Coursera)

POSITIONS OF RESPONSIBILITY	
Vice President CSI Student Chapter KKWIEER	Nashik Sept 2024 – Sept 2025
- Selected among 500+ candidates across various branches, responsible for leading initiatives and organizing well-coordinated events - Collaborated across teams to ensure smooth execution of events and activities, contributing actively to overall success of events	

ACHIEVEMENTS	
- Secured first day campus placement offer, ranking in the top 0.2% among 500+ candidates, demonstrating technical proficiency - Consistently ranked among the top 5 in my department, maintaining high academic performance & steady consistency across sems - Achieved recognition as High School Topper & was featured in a local newspaper for outstanding academic feat (Newspaper)	

EXTRA-CURRICULAR	
- Served as Basketball Team Captain at school level, leading the team to a district-level runner-up finish in government competition - Actively follow sports events across the globe including Football & Cricket, being an ardent follower of Real Madrid & Mumbai Indians
